

## Bike Navi Acrylic case:

### Instructions:

Use the provided SVG file, in order to construct a Bike Navi case from a 3mm Acryl board (Plexiglas). Required minimal board size is 120 mm x 240 mm.

Stack and glue 4 case walls (3 walls with a cut out on top of a wall without a cutout). Keep an eye on the cut out for USB and button, and then screw it together with the top and bottom parts. Use M2 screws 18mm or 20mm long.

For mounting the case on a bike handle, you can use a silicon elastic band.
